Reasons For Allowance

The following is an examiner's statement of reasons for allowance: The prior art fail to teach, suggest, or provide a rationale to one in the ordinary skill in the art to provide a separator with a bypass that connects an upstream-side stage of the gas passage to a downstream side stage of the gas passage and that causes a gas that flows in via an inlet of the bypass to flow out of an outlet of the bypass wherein a gas inlet of the separator and a gas outlet of the separator are located at a same side of the separator and opposite to the bypass. Applicant teaches that since the bypass is provided, a high concentration gas present at the upstream side is conducted to the downstream side via the bypass so that the gas concentration drop at the downstream side is curbed and therefore the state of power generation improves. Furthermore, at the time of high current density, a large amount of water produced at the upstream side flows to the downstream side via the bypass, and therefore can be promptly discharged from the system so as to prevent the reaction produced water to impede the supply of as to an electrode which causes a reduction of power generation performance (specification page 3).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
